

A Better Conduit Outlet Body — Inside and Out!

T&B® Fittings

BlueKote™ Form 7 and Form 8
Conduit Outlet Bodies

*BlueKote™ internal
surface coating reduces
force required to pull wires*

*Cover with integral gasket
reduces inventory and chance of
misplacing a separate gasket!*

*Triple-layer protection — including
two layers of epoxy coating — stops
corrosion in its tracks!*

BlueKote™ Form 7 and Form 8 Conduit Outlet Bodies

Faster, Easier Wire Pulling and Extra Corrosion Resistance!

Why take a chance of damaging your wires while pulling them through conduit bodies? Thomas & Betts has enhanced its line of Form 7 and Form 8 conduit outlet bodies to outperform the competition in these areas and more. T&B BlueKote™ Form 7 and Form 8 conduit outlet bodies feature a slick, Teflon® based BlueKote™ interior finish to make wire pulling faster and easier than ever before and eliminate rough internal surfaces that can damage wires. To safeguard against corrosion, these conduit outlet bodies incorporate not one, not two, but three layers of protection — including two layers of epoxy coating. And to reduce inventory and provide up-front cost savings, both steel and iron covers now come standard with an integral neoprene gasket.

Four-layer protection for the ultimate in corrosion resistance!

Bare Conduit Body

Left in its raw state, all cast iron conduit bodies will rapidly corrode. Anytime the outer finish is compromised, corrosion will attack and propagate throughout the fitting.

Layer 1 — Electro Zinc Plating with Dichromate finish. This layer acts as a durable corrosion inhibitor. It protects the cast iron alloy conduit body from rust, and unlike painted coatings, prevents rust creep. This layer is an industry standard for corrosion resistance.

Layer 2 — Baked-On Epoxy Powder Coating. Epoxy is one of the most corrosion-resistant finishes available. This layer is powder coated, because unlike a conventionally painted surface, a powder-coated finish eliminates pinholes, cracks and crevices, is scratch resistant and holds up better against harsh chemicals.

Layer 3 — Baked-On Epoxy Paint. A final layer of epoxy paint provides the conduit outlet body with even more corrosion resistance.

Baked-On BlueKote™ Teflon® based coating inside the conduit outlet body provides a slick surface for easier wire pulling. It also provides more corrosion resistance on the inside of the conduit body by adding an additional layer of protection.

Form 7 and Form 8 Covers

BlueKote™ Teflon®-based internal finish

- Provides a slick, easy-glide internal surface
- Significantly lowers the amount of force necessary to pull wires
- Reduces installation time and risk of installer strain
- Eliminates rough internal surfaces that can cut into cable jacket, insulation and conductors during pulling

The Result

T&B BlueKote™ conduit outlet body and a leading competitor's conduit outlet body after a seven-day 5% salt-fog chamber test.

The T&B BlueKote™ conduit outlet body still has a glossy sheen and no evidence of salt adhesion or penetration.

The competitor's conduit outlet body has severe salt adhesion and significant rusting.

Sample Specifications for Conduit Outlet Bodies:

1. For protection against corrosion, conduit bodies are to have an electro galvanized finish, followed by a baked-on powder epoxy finish to a minimum of 2.5 mil thickness, and at least one additional baked layer of epoxy applied with an additional 2.0 mil thickness or better.
2. To aid in wire pull, and reduce wire damage, the interior of the conduit bodies are to include a baked-on Teflon® based coating of 2.0 mils minimum thickness.
